

Documentation and Installers Version 8

Learn about the latest releases and access the installers of version 8 of Aranda Asset Management AAM.

Release Notes

Release Notes 8.15

Release Notes Aranda Asset Management 8.15.0

Sending emails with Google Modern Authentication (OAuth 2.0)

A setting has been made to the service (MAILER) that allows supporting the sending of emails using modern authentication (OAuth 2.0) from the provider Google.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.15.0.exe” file and follow the instructions in the installer.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.169

Release Notes 8.14

Release Notes Aranda Asset Management 8.14.4

DBManager Service Improvement: AFW_MAP_PROVIDER_LOG

To control the number of records stored in the AFW_MAP_PROVIDER_LOG table, a setting has been made to the DBManager service. This service now runs a log cleanup task based on the settings provided in the ASDKLMTimer and ASDKLMDaysLog keys in the web.config file.

Configuration in the web.config file

A new set of keys has been introduced in the web.config file:

- ASDKLMTimer: This key determines the recurrence in seconds at which the log cleanup task will run. The default value is 86400, equivalent to 24 hours.
- ASDKLMDaysLog: This key sets the period in days for record retention in the AFW_MAP_PROVIDER_LOG table. The default is 15 days.

Automated Cleaning Task

- The AFW_MAP_PROVIDER_LOG table is automatically cleaned up based on the day retention policy set in ASDKLMDaysLog.
- The frequency of this task is determined by the configuration in ASDKLMTimer, ensuring efficient and automatic management of records.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.14.4.exe” file and follow the installer’s instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.167

Release Notes Aranda Asset Management 8.14.3

CASE PM-39612-19-201187:

Adjustments are made in AAMSettings to support the configuration of SQL user with password, when configuring connections to SQL Server database.

- ▮ Note:
- For the correct configuration with user type (SQL user with password), fill in the fields (User for connection – Password – Server – Database) and select the option (Check).
 - If there is a previous configuration of a Database and you want to select a new database from the same server, delete the data from the (Database) field before Connecting, to generate the Database listing.

UNDERSTANDING IMPLEMENTED CHANGES

Sending emails on behalf of third parties with Modern Authentication (OAuth 2.0):

An adjustment is made to the service (MAILER) that allows supporting the sending of emails on behalf of third parties when modern authentication (OAuth 2.0) is configured.

Currently this action was carried out by associating the specialist’s email in the name sender of the email.

Mail can now be sent on behalf of a third party from the (Send Mail) option when handling the case in the Specialist Web Console (ASDKV8), and when an account is configured in the (Sending Account) field in the AAMSettings Mail Templates settings.

- ▮ Note: The user account configured on the mail server must have the appropriate permission (“Permission to Send As”) in the company’s Active Directory. This

account must be associated with the accounts authorized for impersonation. In the event of impersonation of an account without permissions, the Mailer service generates an exception, which you can view in the Event Viewer.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.14.3.exe” file and follow the installer instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.157

Release Notes Aranda Asset Management 8.14.2

CASE PM-36897-19-201117:

An adjustment is made in the service (MAILER) that allows supporting the sending of emails on behalf of third parties, with the basic authentication configured in the mail server for Aranda Service Desk (ASDK).

▮ Note: Currently Modern Authentication (OAuth 2.0) does not allow sending emails on behalf of third parties, to solve this situation the specialist’s email is configured in the name sender of the email

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.14.2.exe” file and follow the installer’s instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.155

Release Notes Aranda Asset Management 8.14.1

CASE 200784:

Service adjustment (MAILER) is made to support modern authentication settings (OAuth 2.0).

▮ Note: For this update, it is essential to have Microsoft .NET Framework 4.8 on the applications, before upgrading or installing the product

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.14.1.exe” file and follow the instructions in the installer.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.149

Release Notes Aranda Asset Management 8.14.0

CASE 200784:

Service adjustment (MAILER) is made to support modern authentication settings (OAuth 2.0).

▮ Note: For this update, it is essential to have Microsoft .NET Framework 4.8 on the applications, before upgrading or installing the product

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.14.0.exe” file and follow the installer’s instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.148.

Release Notes 8.13

Release Notes Aranda Asset Management 8.13.7

An installer is generated that allows compatibility with other Aranda Software products.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.13.7.exe” file and follow the instructions in the installer.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.147.

Release Notes Aranda Asset Management 8.13.6

An installer is generated that allows compatibility with other Aranda Software products.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.13.6.exe” file and follow the instructions in the installer.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.136

Release Notes Aranda Asset Management 8.13.5

CASE 200392:

Adjustments are made in the module (Cruncher File) that allows the correct processing of the information of the inventory (software_3) when processing new stations and their respective updates.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “aams_8.13.5.exe” file and follow the installer’s instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.122.
