

Aranda Query Manager

Documentation and Installers Version 8

Learn about the latest releases and access the installers of AQM version 8.

Release Notes

Release Notes Aranda Query Manager 8.0.22

CASE 10165:

A correction has been made to the Authentication module, so that it allows access to the console, once the password is updated, either due to its expiration or user entry for the first time.

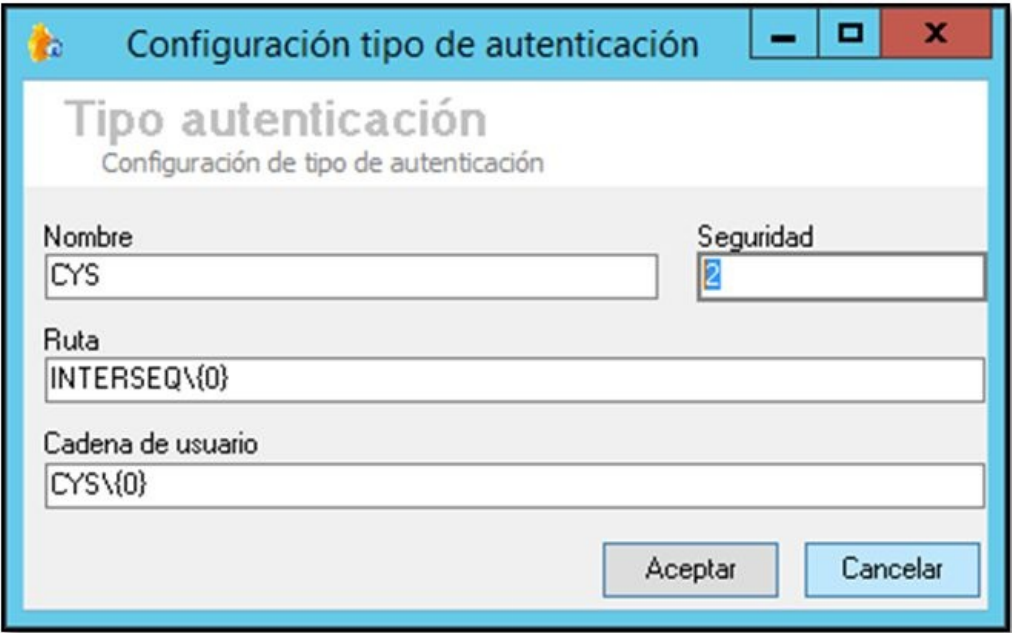

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “Aranda.CMDB.Web.Installer.exe” file and follow the installer instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.65.

Release Notes Aranda Query Manager 8.1.0

CASE 10230:

- The authentication module is updated, so that it allows entry and validation with the Domain, whether it is connected through port 389 or through secure port 636.
- However, for the connection with secure port 636 to be successful, in the domain configuration the “Security” field must be updated with the number “2”, this would indicate that the connection will be made by secure port. This configuration is done in the “Profile” console, entering “Settings/Authentication Type”; you must select the Domain, edit it and in “Security” place the number 2.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “Aranda.CMDB.Web.Installer.exe” file and follow the installer instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.66.

Release Notes Aranda Query Manager 8.1.1

CASE 10603:

Connection libraries are updated, in the installer, to solve the error presented to the authenticate with a Domain user.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “Aranda.CMDB.Web.Installer.exe” file and follow the installer instructions.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.80.

Release Aranda Query Manager Notes 8.1.2

CASE 10783:

Adjustments are made in the web.config of the AQM Web consoles so that the “X-AspNet-Version” in the “Response Header” of the requests that are made to the server, applies to the following sites:

- AQM Console
- AQM SOAP

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “Aranda.AQM.Web.Installer.exe” file and follow the instructions in the installer.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.81

Release Aranda Query Manager Notes 8.1.3

CASE 11220:

A problem that arose with the reports that request Date and Time is solved when the data was selected from the Microsoft Edge browser, now it is possible to correctly select the time either in AM or PM format in any of the browsers supported by the tool.

NOTES OR ADDITIONAL INSTRUCTIONS

- Run the “Aranda.AQM.Web.Installer.exe” file and follow the instructions in the installer.
- The executable file functions as both an installer and an update tool.
- This update applies only to databases in version 8.0.89.
